

Allison 1000 Transmission Serial Number

Allison Transmission has redesigned the transmission nameplates for all 1000/2000 and 3000/4000 Product Family transmissions. The new nameplate design contains only the information essential to the identification of the transmission. The transmission model number will no longer appear on the nameplate. It has been replaced by the serial number. This change was implemented July 2005.

The transmission product family is identified by the first two digits of the transmission serial number:

Serial Number	Product Family
01xxxxxx	1000 and 2000 Product Family
02xxxxxx	3000 Product Family
03xxxxxx	4000 Product Family

*SP models will contain additional information to accommodate military applications. The transmission E-number is embossed on the *SP models and also required for other models sold to the military. The transmission model number is embossed on the nameplate for *SP model and *M7 and *H2 models sold to the military. The model number will not be embossed for any other model.
