New Star Soccer 3 3.16 Cheats This page contains New Star Soccer 3 3.16 cheats list for PC version. All cheats are posted and managed by our community. If your cheats are not working, be sure to check our how to guide section. If you found any problems with this page, tell us about it. New Star Soccer 3 3.16 Cheats Screenshots - New Star Soccer 3 3.16 Cheats - Description :Q: Sum of Squared of Bins defined by max function in Python Let's say I have a list of bin sizes that I want to sum to find the size of the largest bin (like count(max(my\_list))), but I want the sum of the squared bin sizes. I know I can do this with a loop, but I'm wondering if there's a vectorized way to do it. A: This will work: l = [2,3,5,6,7] bin\_sizes = [max(x) - x for x in l] square\_sum = np.sum(np.square(bin\_sizes)) print square\_sum # [12, 45, 140] And then summing all of the squares of the bin sizes is just a simple addition: square\_sum + sum(bin\_sizes\*\*2) # [31, 78, 225] I think this is pretty close to a vectorized approach to the question. numbers = [2, 3, 5, 6, 7] maximum = max(numbers) sum\_squared =

---

sum([(numbers[i]-numbers[i-1])\*\*2 for i in xrange(1, len(numbers)+1)]) print maximum, sum\_squared It's hard to believe there was a time when regular, old paper meant you could go straight from reading something to snacking on an apple (or a full English, for the binge-eaters among you). But thanks to Michael Curry, you can get your daily dose of 17th-century imagery and words right now. For instance, even though the two King's College students who sent us this photo of the King's College library's digital book system last week got into a spot of bother with the college's IT department, they'll probably be thanking
